All portions of grain bins that are expected to be loaded by the use of a permanently installed auger, conveyor, or elevator system shall be considered as a building or other installation under Rule 234C for the purpose of determining appropriate clearances of wires, conductors, cables, and rigid live parts. In addition, the following clearances shall also apply without wind displacement.

A clearance of not less than 5.5m (18 ft.) in all directions above the grain bin shall be maintained from each probe port in the grain bin roof for all wires, conductors, and cables.

A horizontal clearance of not less than 4.6m (15 ft.) shall be maintained between grain bins and open supply conductors, 0 to 22 kV.
The clearances of wires, conductors, cables, and rigid live parts from grain bins that are expected to be loaded by the use of a portable auger, conveyor, or elevator shall not be less than the values illustrated.
